Beauty and Durability SHY ZIP system

The guide rail & the inner rail are one of the SHY ZIP system mechanisms. They support smooth lifting and lowering. Take a look at Cushion Gum. This cushioning rubber between the guide rail and inner rail reduces the load on the screen caused by wind and pressure. The ZIP system is designed to retain the beautiful screen surface created by SHYZIP as long as possible. SHY has more than 30 years of experience in delivering to properties where light, heat, sound, insect, etc. must be blocked. SHY knows ZIP system more than any others because SHYZIP is original from SHY Japan.

Impossible? No, make it possible with SHY.
